To register email [sh-admin@securityhorizon.com](mailto:sh-admin@securityhorizon.com) or call 866-544-6755

**National Security Agency (NSA)  
INFOSEC Assessment Methodology (IAM)**

The IAM is a systematic method for examining security vulnerabilities and was developed by experienced NSA and commercial INFOSEC assessors. The IAM is a course for experienced INFOSEC analysts who conduct, or are interested in conducting, organizational INFOSEC assessments. The course teaches a high-level, non-intrusive process for identifying and correcting security weaknesses with organizations and the organization's technology systems.

**IAM Certification Requirements:** US Citizen plus 5 years of demonstrated experience in the field of INFOSEC, COMSEC or computer security, with 2 of the 5 years of experience directly involved in analyzing computer system/network vulnerabilities and security risks.

**National Security Agency (NSA)  
INFOSEC Evaluation Methodology (IEM)**

The INFOSEC Evaluation Methodology (IEM) is a hands-on methodology for conducting evaluations of customer networks utilizing common technical evaluation tools. Students can expect to learn an easily repeatable methodology that provides each customer a roadmap for addressing their security concerns and increasing their security posture. This course is a follow on course to the popular National Security Agency's INFOSEC Assessment Methodology (IAM) and will result in an NSA certificate for those students meeting the appropriate qualifications.

**IEM Certification Requirements:** IAM certification plus 6 months specific experience with a security evaluation tool.

**Pricing:**

	Retail	GSA	ISSA, ISACA, INFRAGARD
